Yes, You Can Fill Your New Pool or Spa with Water

- > SPASA members are the leading professionals in the pool and spa industry who spend their lives working with water. We recognise that Victorians have wonderfully clean water and that it is a finite and precious resource.
- > If you are considering investing in a pool there are many ways to help conserve water. The average domestic pool holds around 30,000 litres of water, but importantly, should only require occasional topping-up.
- > Significant water savings will result if you; maintain the right chemical balance, ensure your filtration is adequate, install a pool cover and pool-dedicated top-up tank – visit the SPASA website for full details.
